

# 188bet link vao

If a race horse runs 100 races and wins 25 times and loses the other 75 times, the probability of winning is  $25/100 = 0.25$  or 25%, but the odds of the horses winning are 1 to 3. The difference between probability and odds is that probability is a ratio of the number of successful outcomes to the total number of outcomes, while odds are a ratio of the number of successful outcomes to the number of unsuccessful outcomes.
